

Deployment Runbook

Pre-Deployment Checks

- Verify Kubernetes cluster is healthy.
- Check database connectivity.
- Confirm the CI/CD pipeline completed successfully.

Deployment Steps

1. Pull the latest Helm chart.
2. Run helm upgrade api-service.
3. Verify all pods are in Running state.

Rollback Procedure

If the deployment fails:

1. Run helm rollback api-service.
2. Check pod logs using kubectl logs.
3. Notify the Release Management team.
